

Title : TeX Guidelines  
Type of Memo : Normative  
Version Date : August 22, 2016

Make sure you have the latest version of this memo.

## 1 General

Use the correct start for each label, as indicated in Table 1. For example, for a figure you may use `\label{fig:sqomega}`.

Follow the journal's guidelines. Follow recommendation for tables explained in the documentation for `booktabs` at <https://www.ctan.org/tex-archive/macros/latex/contrib/booktabs>. Do not use the following commands: `\over`, `\atop`, `\eqnarray`. Do not use `"`. Use `` `` to open a double quote and `' '` to close them. After a period that does not end a sentence use escape followed by space and not just space. In this situation you may use unbreakable space (tilde) if needed. Enclose equation numbers between parenthesis.

Do not use `\sin`. Use `\sin`. Same for other mathematical functions. Use `\text{ }` inside formulas for text.

The first word of a sentence may not be abbreviated.

## 2 Figures

Include the figure *below* the first time it is cited. Capitalize the word Figure.

Do figures with `tikz`. See examples FIXME.

Label	Item
fig:	figures
tbl:	tables
eq:	equations
sec:	sections

Table 1: Label starts for each item. Use `sec:` as a start also for subsections and subsubsections.

### 3 Bibliography

Use `\cite{re:authormonthyear}` for citations. Use `bibtex` or `BI-LATEX` `FIXME` for the bibliography. `FIXME` NEW FORMAT FOR CITATION LABELS.
